

Tri-Pel

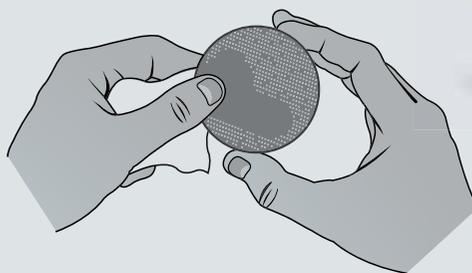

The exclusive Carl Zeiss Vision Sunlens Tri-Pel coating comes down to this simple and effective equation:

Tri-Flection + Ri-Pel = Tri-Pel

This unique production process combines the outstanding easy to clean, oil and water-repellent features of the Ri-Pel coating, along with the subtle tints and technical performances of Tri-Flection patented mirror series. This blend offers an exceptionally long-resistance and anti-smudge mirror treatment, superior to standard ones, often characterized by fragility and a tendency to dirt marks.

Since the Tri-Pel hues don't significantly affect the original transmission of the base lens, they can even be applied on particularly dark lenses.

Tri-Pel
Methane

Tri-Pel
Bronze Titanic

Tri-Pel
Alps Silver
